

Major financial savings with Zyphe[®] shower heat recovery

Did you know, at current energy prices, 30 minutes of shower use per day costs a household around £ 520 per year?

- ✓ Installing a horizontal Zyphe[®] reduces this cost by around a third, meaning that it will have paid for itself within around 3 years.
- ✓ If you have scope to install the vertical Zyphe[®], the savings are even greater.
- ✓ Zyphe[®] shower heat recovery can provide a home with the same overall energy savings as upgrading to triple glazing – but at a fraction of the cost.
- ✓ Achieves the equivalent energy saving for just a few hundred pounds, rather than several thousand.

Low cost • Easy to fit • Low maintenance • Significant energy savings
